

NASA Journey Into Outer Space

Take a voyage of discovery into the atmosphere and beyond! Explore planets, moons and other space phenomena in our solar system. Discover the difficulties of space travel, the challenges of living in space and try assembling a satellite while training to be an astronaut. Build your own Mad Science rocket and launch several with the group. Campers will have lots of projects to make and to take home, plus - Mad Science is the ONLY organization licensed to use these activities for summer camps and school programs. *All material developed by Mad Science and NASA. (Ages 7 - 11)*

These are only a sample of some of the activities that we will be doing each day. The topics will not necessarily follow this order. However, each of these topics will be included at some point in the camp.

Astronaut-in-Training - Discover technology designed for outer space! Steer a laser beam through a laser maze, find hidden mountains using the principles of radar technology, and discover everyday objects that were originally designed for use in space! Bring the excitement home with a Lightning Launcher™ that lights up the sky! And that's just the beginning! Live the life of an astronaut as you suit up for space flight! Find out how much you would weigh if you lived on Neptune, and how old you would be if you lived on Saturn during this action packed camp day.

Earth and Beyond - Explore the farthest reaches of our solar system and create a lunar eclipse in this "mad" planetary tour! Learn how the planets stack up, and build and take home Kepler's Cube™, a fun and educational 3-D solar system puzzle! Next, go on a mission to explore the atmosphere on Earth, and beyond! Travel to the end of the rainbow and make a sunset! Mix up various planetary atmospheres, one molecule at a time; discover how stars would look in space, and see what makes stars twinkle using your very own Shimmering Stars™!

Solar Launch - This stellar program is your ticket to the stars! Watch star dust burn, and journey through a soapy galaxy as you investigate the life cycle of stars! Use your Bead Dipper™ to create a 3-dimensional glow-in-the-dark constellation! Then, it's your chance to become a rocket scientist! Investigate the four forces of flight, and explore the science involved in rocket construction as you build your own Skyblazer II Rocket™ that you can take home!

Space Voyage - Learn what it takes to be a true globetrotter! Race a balloon rocket and design your own car engine as you learn about thrust. See the principles of propulsion at work in a real rocket launch, and build your very own Shuttle Copter™ to fly to the skies!

Eye on the Sky - Probe the mysteries of meteors and bounce around satellite light in this phenomenal program on space phenomena! Learn how to tell the difference between stars, planets and satellites in the night sky. See comets up close as one is formed before your eyes, and take home your very own Catch-a-Comet™!
